SUMMARY

Senior embedded systems engineer with 10 years writing safety-critical firmware for automotive and industrial IoT devices. Expert in C/C++, RTOS (FreeRTOS, Zephyr), and ARM Cortex-M. Functional Safety (ISO 26262) certified practitioner.

SKILLS

C, C++, FreeRTOS, Zephyr RTOS, ARM Cortex-M, CAN bus, UART, SPI
I2C, CMake, GDB/JTAG, Unit testing (Unity, CppUTest), ISO 26262, MISRA C, Python (host tooling)

EXPERIENCE

Senior Embedded Engineer - Continental AG (2018 - present)

- *Developed ASIL-B firmware for an ADAS sensor fusion module deployed in 200 k vehicles.
- *Led migration of bootloader from bare-metal to Zephyr RTOS, reducing boot time by 40%.
- *Designed CAN-FD communication stack compliant with ISO 26262 and reviewed by TUV.

Embedded Software Engineer - Siemens Industrial IoT (2014 - 2018)

- *Programmed FreeRTOS-based data-logger for industrial PLCs, sampling 16 channels at 10 kHz.
- *Reduced flash footprint by 30% via compiler optimisation flags and link-time dead-code elimination.

EDUCATION

MEng Electrical & Computer Engineering - TU Munich (2014)

CERTIFICATIONS

Functional Safety Engineer (TUV Rheinland)
